child's paternal grandmother who threw them into the sea as she pronounced a charm (*ivi-atua*): "Ka oho, kangaro ki hiva!" (May it be lost in a foreign country!) Sometimes the cord was buried under stone, and a charm pronounced over it: "Ka noho hiohio koe i toou kainga!" (May you stay strong in your country!) The land in which the umbilical cord was concealed was tapu; if anyone trod upon it, his legs were covered with white spots (*kino*). Ahu Hanga-varevare, near Tahai, is one of the places where navel cords were hidden. In 1886 Easter Island natives told Thomson that the people who walked over certain rocks near Ana-hoi-hangaroa were afflicted with sore feet. Thomson (215, p. 484) remarks, "We received many solemn warnings in regard to it."

Immediately after birth the child was washed in a large calabash filled with warm water heated with hot stones. According to Knoche (121, p. 660) hot, flat stones were applied to the stomach of the mother after childbirth, to keep the waist without folds. I heard no mention of this custom and the pitiful condition of young women after several childbirths does not testify to the efficiency of this precaution. A woman who has had children is called *heipara*. The same word applies to a plant which produces young shoots.

BIRTH FEAST

A feast was celebrated on the day of the child's birth (*te topanga*). The father's family presented a gift of food to the mother's family. As at the pregnancy feast, the woman ate first or, at her suggestion, her husband started the meal. It was forbidden to cook sweet potatoes in the oven. The oven was tapu and refuse was buried carefully in the ground. Two feasts were given for the first-born child only, whose name was given by the father's brother or sister.

CHILDHOOD

A small child, until he is 6 months old, is a *puepue*; at 6 months he becomes a *poki-tua-huri* (child-who-can-turn). When the child was 6 or 7 months old, his father's brother cut his hair with an obsidian point (*mataa*). At the same time a brother or cousin of his mother gave him a basket containing three or five chickens. This ceremony was called *puoko varu* (hair cutting). When the child began to creep, a maternal uncle gave him a basket with fowls (*kete hakaraka*, basket of crawling). Another present was given to him when he put on his first breechcloth of tapa (*hami-haka-hune*). At 8 or 10 years of age he was tattooed on his legs. At this time his maternal uncle offered him 20 or 30 fowls called *moa o te kona* (fowls for the legs) which became tapu; they could not be eaten by the family but could be traded to a foreigner or transferred to another family, according to the rules of the *koro* (p. 346).

The child was surrounded by many tapus. His head was considered sacred

643 Now he makes the crayfish good to eat and the *poopoo* fish, the moss, the ferns, the *katukatu-atua* plants.
778 What does the king make fertile in the country?
533 The mosses, the ferns, the *katukatu-atua* plants, the king makes grow in the country.
539 Now he makes the mosses favorable, makes the ferns favorable, he makes the roots of the *katukatu-atua* favorable.
What does the king make fertile in the country?
He introduces the tuna fish, the *atu* fish, and the *ature* fish.
Now he makes the tuna fish favorable, he makes the *atu* favorable, he makes the *ature* favorable too.
What does the king make fertile in the country?
The yams, the taro, the sweet-potatoes the king makes grow in the country.
Now he makes the yams, the sweet-potatoes, the sugar cane, the shoots favorable in the country, in the shade.
What does the king make fertile in the country?
The turtle, its abdominal shell, its legs—these he makes grow in the country.
Now he makes the turtle, its abdominal shell and its legs favorable.
What does the king make fertile in the country?
The stars, the sky, the heat, the sun, the moon, the king makes fertile there above.
Now he makes the sky, the heat, the sun, and the moon favorable.
What does the king make fertile in the country?
Going up, he makes the dew, the heat, the sun, the moon favorable.
Now he makes dew, the heat, the sun, the moon favorable.
What does the king make fertile in the country?
The chiefs, the chiefesses he makes favorable in the country.
Now the king makes the chiefs, the chiefesses favorable.
What does the king make fertile in the country?
Worms, earwigs, beetles, the king makes fertile in the country.
Now he makes the worms, the earwigs, the beetles favorable, he makes them grow in the country.

643 241 The first fruits of all the products of the land were presented to the king with great ceremony (described by Roussel, 190, p. 360). "Only the king could initiate the harvesting of crops which were tapu as long as he ordered them to be."

643 782 Certain priestly functions related to nature were incumbent on the king. In time of drought he must send his son or another *ariki-paka* to perform rites beseeching Hiro to make rain fall. It may be assumed that the king also prayed to Hiro for rain, that he had something to do with the fertilizing of the fields, and that his power was beneficial to chickens.

SUPERVISION OF SEMI-RELIGIOUS ACTIVITIES

643 845 ●553 342 Assisted by a priest, the king had to eat in every house before it could be occupied by its owners. He also had to perform rites on a new boat. All twins were presented to him to be given a "royal name." I was unable to obtain details about this name or the mystical beliefs connected with twins.

643 304 Tradition tells that the recently tattooed young men gathered in Anakena and exhibited their designs to the king who sat on the head of an old image to examine them. If he was satisfied with the work of the artist, he said to the young man, "Ka hoa ki Tuna-roa" (Go to the ahu Tuna-roa), but if he

of whom Viriamo was one. The group of houses at the end among the carved rocks was taboo during the festival, for they were inhabited by the rongo-rongo men, the western half being apportioned to the experts from Hotu Iti, the eastern to those from Kotuu. "They chanted all day; they stopped an hour to eat, that was all." They came at the command of Ngaara, but it is noteworthy that he himself never appeared at Orongo, though he sometimes paid a friendly call at Mataveri.

A short way down the cliff immediately below Orongo is a cave known as "Haka-rongo-manu," or "listening for the birds"; here men kept watch day and night for news from the islet below.

The privilege of obtaining the first egg was a matter of competition between members of the Ao, but the right to be one of the competitors was secured only by supernatural means. An "ivi-atua," a divinely gifted individual, of the kind who had the gift of prophecy, dreamed that a certain man was favoured by the gods, so that if he entered for the race he would be a winner, or, in technical parlance, become a bird-man, or "tangata-manu." The victor, on being successful, was ordered to take a new name, which formed part of the revelation, and this bird-name was given to the year in which victory was achieved, thus forming an easily remembered system of chronology. The nomination might be taken up at once or not for many years; if not used by the original nominee, it might descend to his son or grandson. If a man did not win, he might try again, or say that "the ivi-atua was a liar," and retire from the contest. Women were never nominated, but the ivi-atua might be male or female, and, needless to say, was rewarded with presents of food. There were four "gods" connected with the eggs—Hawa-tuu-také-také, who was "chief of the eggs," and Maké-maké, both of whom were males; there were also two females, Vie Hoa, the wife of Hawa, and Vie Kenatea. Each of these four had a servant, whose names were given, and who were also supernatural beings. Those going to take the eggs recited the names of the gods before meat, inviting them to partake.

The actual competitors were men of importance, and spent their time with the remainder of the Ao in the stone houses of the village of Orongo; they selected servants to represent them and await the coming of the birds in less comfortable quarters in the islet below. These men, who were known as
